Bridging the Digital Divide

Building Health Self-Efficacy through Communication-Accessible Online Environments

Many **healthcare**, **information**, and **support services** are now accessed **online**. Using online services require skills in reading, writing, and understanding. This can be hard for people with aphasia.

We will **work together** with **people with aphasia**, **family members**, and **health professionals** to co-design:

1. **Communication Accessible Plug-in** (CAP) to re-render website content to meet individual communication needs

2. **Training package** for customising the CAP software

3. **Guidelines** to promote knowledge and awareness of communication accessible websites

CAP PACK

- Communication Accessibility Plug-in (CAP)
- Guidelines for Communication Accessible websites
- Decision-making Tools and Training Package
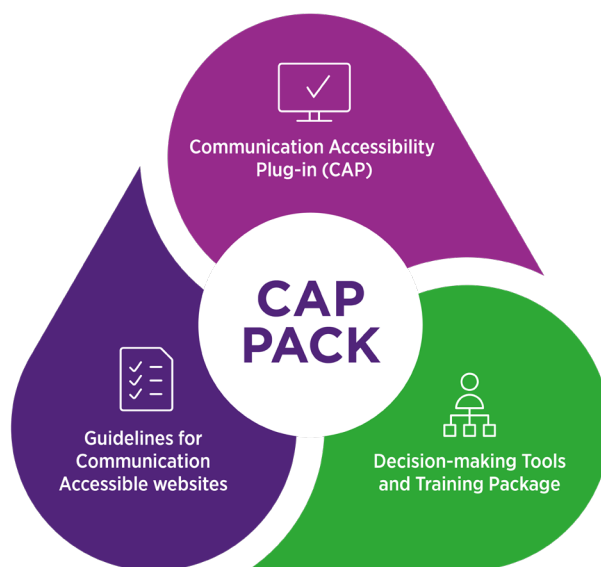

This project has **six (6) stages:**

| Project establishment | Information gathering | Co-design | Experience testing | Field testing | Sharing outcomes |

Our **partner organisations** include Australian Aphasia Association, Australian Disability Network, Centre for Accessibility Australia, National Disability Insurance Agency, Services Australia, and the Stroke Foundation.

The Bridging the Digital Divide project is funded by the Medical Research Future Fund (MRFF) Consumer-Led Research opportunity.

Team members: Sarah Wallace, Kim Barron, Phill Jamieson, Peter Worthy, Jennifer Lee, Ryan Deslandes
