

Clinical Placement Quality Survey

Fact Sheet for Clinical Educators

Background

Creating high quality learning environments for students is important to higher education training. It is imperative that universities, the clinical educators, and facilities gain an understanding of the current clinical education practices to maintain and improve the quality of clinical education experiences for the future. This can occur through seeking and responding to regular feedback from clinical educators following provision of clinical placements.

Survey Completion

At the end of each clinical placement, you will be asked to complete the Clinical Placement Quality Survey- Educator (CPQS-Educator) survey to evaluate your perception of the quality of the clinical placement you have just provided. You will be able to access the survey within [APPLinkup](#) at any time, however, it is recommended finalisation of the survey should be completed at the end of placement.

Your participation to complete the survey is voluntary. The survey will take approximately 10 minutes.

Physiotherapists from participating placement providers who provide clinical education (clinical educators) are encouraged to complete a survey for each university pertaining to the students who were on placement. Clinical educators should only complete surveys for universities in which they supervised student/s.

By completing the survey/s, you agree to the use of the survey responses for the review, evaluation and reporting of outcomes on the quality of the clinical education placement. Survey responses collected will inform the ongoing quality improvement of clinical placements and clinical education support within Queensland.

To complete the survey, log on to APPLinkup.

1. Select in the left-hand column "My Surveys"
2. Click on "Start New CPQS-Educator Survey"
3. Complete survey

Click "Save& Submit Later" to save as draft or "Submit CPQS-E Survey Form" to finalise survey

Handy Tip for Educators

Clinical educators have an opportunity to duplicate their survey responses.

Sections 1-3, 6 and 9 will likely have consistency across universities. It may be beneficial to complete these sections prior to duplication.

Survey Responses

Your survey responses will be de-identified in the collation of the data from this survey. All survey responses will be combined with other students' responses to preserve anonymity. However, in the event there is a small volume of students on a single placement, it may be possible that an individual student/s identity could be deduced despite the data being de-identified.

Your university and the coordinator of clinical education at the placement facility will only have access to de-identified survey responses. Access to the survey responses will not occur until your APP mark has been finalised by the university. Therefore, completing this survey will not impact your APP score.

Your university clinical education contacts will discuss with you the importance of providing professional, effective, and constructive feedback. If you have any concerns, please discuss with your university clinical education contact.

Thank you for your contribution to evaluating your clinical experience.
