# Clinical Education Fact Sheet #5

## Clinical practice learning outcomes

The learning outcomes for each clinical immersion, regardless of the area of focus, are detailed below. These objectives are aligned with the Physiotherapy Standards of Practice and accreditation requirements, the Australian Qualification Framework (AQF) and The University of Queensland Graduate Attributes.

After successfully completing this course, learners should be able to:

**LO1.**

Demonstrate professional and ethical behaviour by upholding patient/client rights, practising legally and in a culturally responsive manner, engaging in ongoing learning, and collaborating effectively with others.

**LO2.**

Communicate effectively in clinical contexts using clear, appropriate verbal, non-verbal, and written communication to support safe, person-centred care.

**LO3.**

Conduct comprehensive, client-centred assessments by gathering relevant information, selecting appropriate measures, and performing accurate physical assessment procedures.

**LO4.**

Analyse assessment findings to inform clinical reasoning by identifying and prioritising client problems, setting realistic goals, and planning appropriate interventions collaboratively.

**LO5.**

Implement, monitor, and progress interventions safely and effectively, including providing client education and planning for discharge in alignment with client goals.

**LO6.**

Apply evidence-based practice by integrating research evidence, clinical expertise, and client preferences into clinical decision-making.

**LO7.**

Manage clinical risk proactively by identifying adverse events or near misses and taking appropriate actions to minimise harm during assessment and intervention.
