

BEYOND THREE MONTHS DOES NOCICEPTION STILL MATTER?

Rethinking persistent pain beyond three months

Persistent pain is often viewed through the lens of central mechanisms, leading to the belief that nociceptive contributors are no longer relevant once pain persists beyond three months. But is this really the case?

Watch Professor Paul Hodges and an expert panel explore current evidence, clinical examples and practical implications for persistent pain.

EXPERT PANEL DISCUSSION

Professor Paul Hodges

Director, CIPHeR
The University of
Queensland

**Associate
Professor
Shaun O'Leary**
The University of
Queensland

Dr Helen Fleming
Specialist MSK
Physiotherapist
Brisbane Physio
Specialists

Dr Tim Austin
Specialist Pain
Physiotherapist
University of Sydney

Bella Fitzgibbon
Consumer
Representative
Musculoskeletal
Health Australia

Kevin R James
Chronic Pain Patient
Advocate & Writer

Recorded 1 September 2026
